I have not seen or used the Lightroom mobile application. Therefore, my review is based on the desktop version only. Improving performance is something we have been hearing about how Apple manages. There is little point in Apple improving the Windows version to match what the Mac version offers. This means that, although Lightroom 5 is not slow by any means, an improvement in performance might not be possible. Even though I haven't done a speed test, I can assure you that scrolling in the library view is no quicker than with Lightroom 4. You can click on every thumbnail to open the full-screen view, and it's no faster than before. This is not something I've noticed in the other areas of the program. The first thing I opened was a catalog, and having to scroll this large might take a little more time than before. The biggest feature in Lightroom 5 is called "Smart Preview," which features a new look on the screen on image previews that allows us to see if the processed version is any different in light and color than the original image. As we often use RAW files to impart our creative vision with our photos, we are often shooting with a variety of lenses. These lenses often introduce a slight and possibly irreversible color cast into the processed image. Adobe has introduced "Smart Preview" to fight color drift. This is actually a feature that's been available to premium subscribers for a few months now, but the "Premium" version for Lightroom 5 is considerably different. For starters, it's free.

What It Does: The Sharpen tool lets you sharpen or blur an image, which can be a helpful tool to fine-tune a photo. Place a soft edge around parts of a photo that you'd like to keep clear or blur the edges on someone's face to soften the look. Maybe a slight blur in a traffic shot helps to let cars blur out into the horizon — just remember to add the proper effects back in, too. **What It Does:** The Gradient tool lets you create a continuous strip of color, sort of like a rainbow or a belt of fabric. The Gradient tool comes in handy when you're trying to achieve a specific look in your artwork. For example, you might want to darken an image from a coarse stripe, such as red, orange, or yellow, all the way to a softer shade, such as greens or blues. Or you can create a harmonious look from the darkest shadows to the brightest highlights by using a gradient. **What it Does:** The Liquify tool helps you to transform your selected objects, like letters and shapes, to create amazing designs and artistic effects. Make your letters faceted, slanted or curved. Bend lines, change their height, and create weird shapes that appear to be bursting out of your letter. You can even pull out one part of the letter shape and "stick" it on your image. Use the Warp tool to bend, stretch and distort parts of an image. **What It Does:** The Brush tool gives you access to the painting techniques used by real artists over the centuries. You can change the size, shape, and type of your brush, as well as the angle and depth of your stroke. You can also adjust the "flow" of the paint using your brush settings. The meticulously calibrated settings you've chosen until now also come in handy. For instance, you can adjust your brush settings to accommodate for the texture on the object you're painting. e3d0a04c9c
